

Connexall[®]

The Heart of Connected Care.

Every patient deserves a seamless and supportive hospital experience – from admission to treatment to discharge. Connexall connects people, tasks, and devices into one intuitive platform, making care safer, communications clearer, and every step of the journey better.

IMPROVE THE PATIENT EXPERIENCE

The Problem

Disjointed communication systems and outdated workflows lead to delays, frustrations, and inefficiencies for patients and staff.

Improve the patient experience with Connexall.

Solutions that Leverage Connexall

Appointment Reminders

Patients receive automated appointment reminders and may confirm or change appointments in advance.

Check in

When patients arrive in the waiting room, they sign in on a kiosk and then look at a screen that shows their order in line.

Nurse Call

Patient needs are handled appropriately when nurse call alerts connect directly to their assigned caregivers.

Patient Whiteboard

Integrations with in-room digital whiteboards display assigned caregivers and information about care delivery – and can also offer entertainment options.

Telehub Communications Center

Bedside patient monitors send heart rhythms to a central monitoring unit. Tele techs evaluate patients' conditions and notify caregivers appropriately.

Fall Prevention

Bed and chair exit alarms trigger lights, sounds, and device notifications that alert caregivers and nearby staff to assist patients more rapidly and prevent unassisted falls.

Patient Flow

Notifications of admissions, appointments, lab work, and discharges alert the appropriate staff and porters involved in patient care and transport.

Discharge

Caregivers and housekeeping staff receive immediate discharge notifications, enabling prompt patient discharge and room cleaning.
