

Epic Rover[®] App

Connexall can provision the devices running Epic Rover. Connexall offers integration capabilities with EPIC Rover designed to optimize event notifications, workflows and patient care. Connexall brings alarms & alerts to devices using Epic mobile applications.

Key benefits that this integration offers include:

Users

Connexall can import Epic users from Active Directory/Lightweight Directory Access Protocol (AD/LDAP) to the Epic EHR directory to populate unified communication or treatment team assignments and roles. Connexall alerts designated healthcare staff in real-time helping to ensure timely and accurate patient care.

Task assignments and escalations

Associate alarms and alerts, as defined by Epic, to specific user groups for appropriate staff notifications. Connexall helps with Assignment Sharing to designate, prioritize, and escalate notifications according to predetermined parameters.

Mobile notifications

Provision devices running Epic Rover. Connexall can enable users to login to their mobile device and immediately begin receiving assigned alerts. This improves communication and reduces response time.

Workflow

Connexall's integration with Epic Rover can be flexibly tailored to your unique workflow and clinical environment; including activations, escalations, priorities, etc.

Discover the power of Connexall's integration with EPIC Rover today!
Enhance your healthcare facility's communication and workflow management, ultimately leading to enhanced patient care and safety.
